

With Argus, you get the decision support you need when you need it — empowering you with the tools to make informed choices about your business. Argus provides a variety of decision support tools and services for fast, accurate, and flexible reporting results that help your business grow. Employing Argus' comprehensive set of reporting tools ensures you have the right decision support tool for each unique business situation.

standard reports

Argus' Reporting Warehouse contains more than 80 standard management and financial report formats that can be run at various levels (customer, client, member, pharmacy, or prescriber) and for various time frames. To enhance the value and flexibility of our standard reports, we can apply numerous filters to almost any data category, making thousands of customer-specific variations possible without programmer intervention. Existing reports can be modified, or we can build new reports to meet your business needs.

The Argus Reporting Warehouse closely monitors the process of producing reports, from scheduling to production to delivery, to support timely delivery of your reports.

ad hoc reporting tool

RxFocus® is Argus' unique ad hoc claim review, analysis, and decision support tool that lets you create customized claim inquiries and reports from your desktop. Argus knows there are parts of your business that are not standard. It is these parts to which standard reports simply do not apply.

Inquiries and reports generated in RxFocus can be organized at various levels of data — drug, pharmacy, physician, group, or member — placing a wide variety of decision-making information at your fingertips.

RxFocus is one of the most flexible reporting tools available, with more than 170 unique data elements available to create ad hoc report requests.

To simplify the creation of common reports, Argus has developed a set of report templates to use with RxFocus. These reports can be used exactly as they are set up or modified to meet your needs.

Reports can be produced both when and how you need them, allowing you to save time and resources when making critical decisions. Access to reporting is available 24 hours a day, and reports can be exported to a variety of programs.

web-based reporting tool

RxFocus IISM provides real-time, multi-dimensional ad hoc analysis that is available through an Internet browser. Argus is leveraging the internet, as a tool of convenience, to improve your business. In seconds, you can generate, save, and distribute reports at all levels of your business via the web, your intranet, or your extranet.

RxFocus II has Online Analytical Processing (OLAP) capabilities to analyze data and create reports online.

You can explore and analyze data from almost any angle and in any combination with RxFocus II. The results of your initiatives are easily documented, keeping your costs down and providing high-quality member care.

Whether you choose standard, ad hoc, or web-based decision support tools, Argus strives to provide you information the way you need it, when you need it, to help you meet your business objectives.
